

## Grenville Davey: Artist-in-Residence

The Newton Institute was delighted to welcome Turner Prize winning sculptor Grenville Davey as the artist-in-residence for the duration of the *Mathematics and Applications of Branes in String and M-theory* programme from January to June 2012. Professor Davey worked with Dr David Berman, one of the programme organisers, who is an expert in M-theory, an extension of string theory.

Davey's recent interests and work have been inspired by the ideas from string theory and its way of describing our universe. Grenville worked with visiting mathematicians during his residency and has produced several pieces of work which are displayed at the Institute.
