Step I:

Delphi phase I (qualitative): Gathering a broad range of stakeholders' opinions on priorities for local CAMHS transformation

SLR: Defining broad areas to be covered in the SLR corresponding with key priorities for CAMHS transformation.

Data charting search to estimate the breadth and type of evidence available in selected areas.

Delphi round 1: Identifying key priorities for local CAMHS transformation endorsed by stakeholders

SLR: Based on panellists' ratings and results of evidence charting searches, defining coverage and breadth of searches.

Defining inclusion/exclusion criteria.

Defining search terms.

Delphi round 2: Reaching final consensus regarding key priorities for local CAMHS transformation

SLR: Selection of themes within each SLR area for detailed data extraction and reporting.

Selecting data analysis framework.

Defining an optimal, 'fit for purpose' method of presenting findings.
