

Figure 1. Examples of stimulus slides used. (A) morphed female disgusted face with hair on the left paired with a neutral face on the right (B) morphed female happy face with no hair on the right paired with a neutral face on the left (C) morphed male angry face with no hair on the left paired with a neutral face on the right (D) a pair of neutral faces with no hair labelled angry.

Fig 2. Mean accuracy as a function of valence and side of presentation. Error bars represent one standard error.

Figure 3. Proportion of right side choices as a function of label for the double-15\% morph condition. Error bars represent one standard error.

Figure 4. Mean number of fixations in males and females as a function of side, valence, and region. Error bars represent one standard error.

Figure 5. Mean fixations in males and females for each region. Error bars represent one standard error.
