Reporting Summary

Nature Portfolio wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Portfolio policies, see our <u>Editorial Policies</u> and the <u>Editorial Policy Checklist</u>.

Please do not complete any field with "not applicable" or n/a. Refer to the help text for what text to use if an item is not relevant to your study. For final submission: please carefully check your responses for accuracy; you will not be able to make changes later.

Statistics

For	statistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.	
n/a	Confirmed	
	Z The exact sample size (n) for each experimental group/condition, given as a discrete number and unit of measurement	
\checkmark	A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly	
	${ m Z}$ The statistical test(s) used AND whether they are one- or two-sided Only common tests should be described solely by name; describe more complex techniques in the Methods section.	
	A description of all covariates tested	
	Z A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons	
	A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)	ent)
	\mathbb{Z} For null hypothesis testing, the test statistic (e.g. <i>F</i> , <i>t</i> , <i>r</i>) with confidence intervals, effect sizes, degrees of freedom and <i>P</i> value noted <i>Give P values as exact values whenever suitable.</i>	
\checkmark	For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings	
\checkmark	For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes	
	Z Estimates of effect sizes (e.g. Cohen's d , Pearson's r), indicating how they were calculated	
	Our web collection on <u>statistics for biologists</u> contains articles on many of the points above.	
So	ware and code	

Policy information about availability of computer code Data collection Web Data analysis Excel/Google docs

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Portfolio guidelines for submitting code & software for further information.

Data

Policy information about availability of data

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A description of any restrictions on data availability
- For clinical datasets or third party data, please ensure that the statement adheres to our policy

All data uploaded to OSF with link provided in manuscript

Research involving human participants, their data, or biological material

Policy information about studies with <u>human participants or human data</u>. See also policy information about <u>sex, gender (identity/presentation)</u>, <u>and sexual orientation</u> and <u>race, ethnicity and racism</u>.

Reporting on sex and gender	N/A
Reporting on race, ethnicity, or other socially relevant groupings	N/A
Population characteristics	N/A
Recruitment	N/A
Ethics oversight	N/A

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Field-specific reporting

Please select the one below that is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.

🗌 Life sciences 🛛 🗹 Behavioural & social sciences 📄 Ecological, evolutionary & environmental sciences

Did the study involve field work?				

Field work, collection and transport

Reporting for specific materials, systems and methods

We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.

Materials & experimental systems

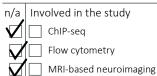

n/a	Involved in the study	n/a	Γ
\checkmark	Antibodies	∇	
∇	Eukaryotic cell lines	\checkmark	ľ
Ż	Palaeontology and archaeology	\mathbf{V}	ĺ
Ż	Animals and other organisms		
\mathbf{V}	Clinical data		
Ż	Dual use research of concern		
Ň	Plants		

Antibodies

Antibodies used

Validation

Methods

Eukaryotic cell lines

Policy information about <u>cell lines</u>	and Sex and Gender in Research
Cell line source(s)	
Authentication	
Mycoplasma contamination	
Commonly misidentified lines (See ICLAC register)	
• /	

Palaeontology and Archaeology

Specimen provenance						
Specimen deposition						
Dating methods						
Tick this box to confirm that the raw and calibrated dates are available in the paper or in Supplementary Information.						
Ethics oversight						
Note that full information on t	e approval of the study protocol must also be provided in the manuscript					

Animals and other research organisms

Policy information about studies involving animals; <u>ARRIVE guidelines</u> recommended for reporting animal research, and <u>Sex and Gender in</u> <u>Research</u>

Laboratory animals	
Wild animals	
Reporting on sex	
Field-collected samples	
Ethics oversight	

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Clinical data

Policy information about <u>clinical studies</u>

All manuscripts should comply	with the ICMJE	guidelines for p	ublication of c	<u>clinical research</u>	and a complete	d <u>CONSORT</u>	<u>checklist</u> n	nust be included	with all sub	missions.

Clinical trial registration	
Study protocol	
Data collection	
Outcomes	

Dual use research of concern

Policy information about <u>dual use research of concern</u>

Hazards

Could the accidental, deliberate or reckless misuse of agents or technologies generated in the work, or the application of information presented in the manuscript, pose a threat to:

National security Crops and/or livestock

Any other significant area

Experiments of concern

Does the work involve any of these experiments of concern:

No Yes Demonstrate how to render a vaccine ineffective \mathbf{V} \square Confer resistance to therapeutically useful antibiotics or antiviral agents $\sqrt{}$ Enhance the virulence of a pathogen or render a nonpathogen virulent Increase transmissibility of a pathogen Alter the host range of a pathogen Enable evasion of diagnostic/detection modalities Enable the weaponization of a biological agent or toxin

Any other potentially harmful combination of experiments and agents \mathbf{V}

Plants

Seed stocks	
Novel plant genotypes	
Authentication	

ChIP-seq

Data deposition

	Confirm that both raw and final processed data have been deposited in a public database such as GEC	<u>)</u> .
--	---	------------

Confirm that you have deposited or provided access to graph files (e.g. BED files) for the called peaks.

Data access links May remain private before publication	on.		
Files in database submission			
Genome browser session (e.g. <u>UCSC</u>)			
Methodology			
Replicates			
Sequencing depth			
Antibodies			
Peak calling parameters			
Data quality			
Software			

nature portfolio | reporting summary

Flow Cytometry

Plots

Confirm that:

The axis labels state the marker and fluorochrome used (e.g. CD4-FITC).

The axis scales are clearly visible. Include numbers along axes only for bottom left plot of group (a 'group' is an analysis of identical markers).

All plots are contour plots with outliers or pseudocolor plots.

A numerical value for number of cells or percentage (with statistics) is provided.

Methodology

Sample preparation	
Instrument	
Software	
Cell population abundance	
Gating strategy	

Tick this box to confirm that a figure exemplifying the gating strategy is provided in the Supplementary Information.
